

What are Eaton power distribution units?

The Eaton line of three-phase power distribution units (PDUs) provide specifications of any facility or data center. The PDU offers ratings from 50 to 500 kVA with DoE 2016-efficient K13 and K20 transformers. Energy Management System (EMS) offers cost effective intelligence to manage load efficiency.

What is a power distribution unit (PDU)?

A Power Distribution Unit (PDU) allows two generators to be synchronized, and both are brought online to supply power to a common bus. The PDU is sized to handle the load that the two generators can supply. HDT offers Power Distribution Units (PDUs) and Utility Distribution Boxes (UDBs) in various configurations.

What is a 30 kW PDP?

The 30 kW PDP is designed to accept power at 120/208 VAC, 3-phase, using a 100 amp Class-L connector. It then distributes power at 120/208 VAC 3-phase and 120 VAC 1-phase. Power Distribution Panels (PDPs) like the 30 kW PDP are used to provide power to equipment requiring 120/208 VAC electrical power.

What is a power distribution box (PDU)?

The PDU is sized to handle the load that the two generators can supply. Utility Distribution Boxes (UDBs) provide safe power distribution in applications requiring feed-thru to larger areas. Advanced Mobile Electric Power Distribution System (AMEPDIS) is a digitally controlled, highly ruggedized power distribution unit.
