

What are the components of a liquid cooled rack solution?

The critical components of Supermicro's liquid cooled rack solution are: Coolant Distribution Unit (CDU)- Contains the pumping system that circulates the coolant to the cold plates cooling down the CPUs, GPUs, and DIMMs.

What makes a good liquid cooling system?

A liquid cooling solution needs to be flexible enough to handle a wide range of servers, while being able to cool an entire rack of high performance systems. Supermicro GPU-optimized systems provide maximum acceleration for large-scale AI training, large language models, and generative AI applications.

What is a direct liquid cooled datacenter container?

Direct liquid cooled datacenter containers with up to 660 server and 2MW hosting capacity enabling sustainable heat reuse. The only Direct Chip Cooling cold plate module which allows individual user to configure server cooling loop and to implement direct liquid cooling for any server model.

How many GPUs can be integrated in a Standard 48U rack?

For maximum GPU density, a liquid-cooled 4U architecture can be integrated using Supermicro's complete direct-to-chip liquid cooling solution, allowing up to 8 systems in a standard 48U rack for a total of 64 GPUs.
