

What are enclosure backplates & panels?

Enclosure backplates and panels provide a secure, organized mounting surface for electrical and control components inside industrial enclosures. These panels are typically offset from the enclosure wall, allowing devices to be mounted without compromising the enclosure's structural integrity or NEMA rating.

What are enclosure mounting plates?

Enclosure Mounting Plates - Mounting plates, mounting boards or chassis plates are a type of enclosure accessory ideal for installing electrical parts and components inside enclosures, allowing you to enhance the internal configuration when mounting to a wall or surface.

What is a back plate?

Back plates are a popular option for many enclosure applications. Back panels or sub-panels for enclosures are used for installing electronics to the walls of the cabinet. The panel eliminates the need to compromise the integrity of the enclosure by drilling directly through the enclosure back wall or sidewall.

Are enclosure backplates removable?

Most enclosure backplates and interior panels are removable, allowing components to be assembled, modified, or serviced without uninstalling the entire enclosure. Q: What materials are enclosure backplates and panels made from?
