

What is the difference between plastic and metal electrical boxes?

There are a few key differences between metal and plastic electrical boxes. Metal boxes are generally more durable than plastic boxes, and they offer better protection against fire. Metal boxes also tend to be more expensive than plastic boxes. Is it OK to use plastic electrical boxes?

Which electrical box is best?

Your electrical wiring determines which electrical box is best to install. Romex(NM-B cable): Plastic or metal containers work equally well for this purpose. Plastic boxes stay light and fight corrosion yet metal boxes give stronger electrical connections. Metal conduit: Requires metal boxes.

What is a metal electrical box?

Metal electrical boxes are also a great option in projects where you need long-term durability and extra security against tampering or unauthorized access. These electrical back boxes are made from PVC (polyvinyl chloride) or ABS (Acrylonitrile Butadiene Styrene).

Should outdoor electrical boxes be plastic or metal?

In extreme environments, metal boxes may be preferred over plastic due to their durability and ability to dissipate heat. GFCI Protection: Outdoor electrical boxes should be equipped with GFCI outlets to protect against ground faults. These outlets are especially critical in outdoor environments where moisture is a concern.

By carefully weighing the wiring type, installation environment, load requirements, and safety codes, you can confidently select the optimal electrical box - metal or plastic - ensuring a safe, efficient, and ...
