Is scrap metal recycling a good idea?

Scrap metal recycling is a great way to contribute to a greener environment as almost all types of scrap metal can be recycled or reused due to their almost continual usage and life cycles. Here at TM Recycling, we recycle both ferrous and non-ferrous metals, high temperature alloy, precious metals and electronic wastes.

Is scrap metal a waste?

Although scrap metal is often considered waste, it is still a valuable product and a popular commodity. Now before you start recycling you need to understand the different classifications. Every metal falls under one of two classifications: ferrous and non-ferrous metals. Ferrous metals are the most common type of recycled metals.

What is cable scrap?

Cable scrap is a type of scrap that refers to the leftover, unused, or damaged cables and wires that are left over from various industrial and construction projects. These scraps can be recycled and reused in a number of different ways, making them a valuable commodity for both businesses and individuals.

Can computer parts and electrical items be recycled?

Computer parts and electrical items, often overlooked, contain significant amounts of metal that can be recycled and repurposed, contributing to both environmental sustainability and financial returns. Metal recycling eliminates the need for new metal production, conserving vital resources like coal and iron ore.
