

What is a battery casing?

Battery casings are essential components in all types of lithium and lithium-ion batteries (LIBs) and typically consist of nickel-coated steel hard casings for 18650 and 21700 cell formats. These steel casings comprise over one quarter of total battery cell mass and do not actively contribute to battery capacity.

Can steel casings improve battery performance?

These steel casings comprise over one quarter of total battery cell mass and do not actively contribute to battery capacity. It is therefore possible to achieve considerable battery performance improvements, in terms of device energy density, by reducing the mass of the battery casing.

Can stainless steel be used for EV battery casings?

Outokumpu automotive experts has compiled a guide for automotive and battery system designers keen to explore the possibilities of using high performance stainless steels for EV battery casings.

What makes a good battery casing?

The casings that house the lithium-ion battery modules used in electric vehicles (EVs) must provide a vital combination of heat resistance, sustainability, processability and high strength.

There are two Ni coating methods for battery cases: post-coating in which formed cases are coated using a barrel or other similar tool and pre-coating in which coated sheets are formed into cases. For ...
