

How much energy does a building use in Canada?

Buildings account for 18% of Canada's GHG emissions, making it the third-largest emitting sector after the oil and gas and transportation sectors. The majority of energy use in residential buildings goes toward space heating (63%), with lights and appliances (19%), water heating (15%), and cooling (3%) representing the remainder of energy use.

How much energy does a Canadian household use?

In 2019, about 15 million Canadian households consumed 1.5 billion gigajoules (GJ) of energy to power activities inside the home, with the average Canadian household consuming just under 100 gigajoules of energy.

Why is electricity important in Canada?

Electricity is essential to our daily lives. As our population continues to grow and Canadian households and businesses switch from fossil fuels to electricity to heat their homes, power our transportation and fuel our industries, demand will rise significantly and electricity systems will need to expand.

What is the survey of household energy use (Sheu)?

The Survey of Household Energy Use (SHEU) is a joint project between Statistics Canada and Natural Resources Canada (NRCan). It collects data on the energy use characteristics of private dwellings in Canada and on household use of energy resources.

Canada's commitment to achieving net-zero greenhouse gas emissions by 2050 demands a massive scaling of electricity supply to meet the growing demand required to reach the ...

Navius completed an analysis looking at whether Canada's electricity systems can handle the electrification of buildings, including impacts on peak load, using a version of our in-house energy ...

It collects data on the energy use characteristics of private dwellings in Canada and on household use of energy resources. This report provides highlights from the survey and insights on household energy ...

The study emphasizes that all-electric heating options, including air-source heat pumps and ground-source heat pumps, not only offer competitive pricing but also significantly reduce ...

The program was renewed in Budget 2023 and closed for applications in January 2024. Two regional dialogues and studies were conducted in Western and Atlantic Canada. The studies used simulation ...
