

What does crate mean?

If something is crated, it is packed in a crate so that it can be transported or stored somewhere safely. A crate is a plastic or wire box divided into sections which is used for carrying bottles. A crate of something is the amount of it that is contained in a crate. Collins COBUILD Advanced Learner's Dictionary.

What is a crate used for?

A crate is a large shipping container, often made of wood, typically used to transport or store large, heavy items. Steel and aluminium crates are also used. Specialized crates were designed for specific products, and were often made to be reusable, such as the "bottle crates" for milk and soft drinks.

What is a crate made of?

Crates can be made of wood, plastic, metal or other materials. The term crate often implies a large and strong container. Most plastic crates are smaller and are more commonly called a case or container. Metal is rarely used because of its weight. When metal is used, a crate is often constructed as an open crate and may be termed a cage.

What is an open crate?

Typically an open crate will be constructed of 12 pieces of lumber, each along an outer edge of the content and more lumber placed diagonally to avoid distortion from torque. When any type of crate reaches a certain size, more boards may be added. These boards are often called cleats.
