

How do you dispose of electrical wires?

Any electrical wiring waste or UNUSED ELECTRICAL WIRES should be disposed of properly, following recycling process guidelines. Copper wires are valuable and can be taken to a scrap yard. While stripping the bare copper wires of their insulation will reduce their weight, the value increases significantly.

Should electrical wires be thrown in the trash?

Electrical wires, especially electrical cables containing heavy metals, should never be thrown in the regular trash. Instead, take them to a recycling center that deals with electronic waste. It's one of the best things you can do to reduce the amount of waste and protect the environment.

Should electrical wires be discarded?

While stripping the bare copper wires of their insulation will reduce their weight, the value increases significantly. Electrical wires, especially electrical cables containing heavy metals, should never be thrown in the regular trash. Instead, take them to a recycling center that deals with electronic waste.

How do you dispose of hazardous waste?

Wrap the waste in newspaper and place in two layers of plastic garbage bags. Label the outside of the bag. Store in an out-of-the-way location, away from heat and children or pets. Ignitable wastes should be stored away from the house if possible. It is always best to avoid disposing of hazardous household products. Try to buy only what you need.

Electrical wires, especially electrical cables containing heavy metals, should never be thrown in the regular trash. Instead, take them to a recycling center that deals with electronic waste.
