

What is Big Bang theory?

We will also go through the basics of Big Bang Theory and its key evidence, like Cosmic Microwave Background Radiation, Redshift of Galaxies, and Abundance of light elements present in the Universe, to make us understand how our universe evolved. Observational support remains based on these pillars: redshift, CMB and primordial element abundances.

What evidence supports the Big Bang theory?

These concepts are supported by observational evidencesuch as the Cosmic Microwave Background Radiation,which is the afterglow of the Big Bang,and the abundance of light elements like hydrogen and helium,predicted by Big Bang nucleosynthesis. What does the term "singularity" mean in the context of the Big Bang Theory?

Where did the energy needed for the Big Bang come from?

The energy needed for the Big Bang had to come from somewhere. Asked by: Elliott Farquhar, via email We're taught at school that energy can't be created, merely converted from one form to another. But at the birth of the Universe - that is, everything - the energy needed for the Big Bang must have come from somewhere.

Does the WMAP survey support the Big Bang theory?

The WMAP survey provides strong evidence that supports the Big Bang theory. The pattern of radiation is similar to what astrophysicists predict it would be if the Universe started from a very dense state and expanded to its present size. This image represents growth and evolution of the Universe since the Big Bang.
