

Garage battery Electrical Box height from outdoor

How high should a garage outlet be?

The NEC does not define a specific height. However, the accepted industry standard garage outlet height is between 12 and 18 inches from the finished floor to the bottom of the outlet box. This practical height is considered a best practice for a professional electrical installation. Do all garage outlets require GFCI protection?

How high should an outdoor electrical outlet be?

The required height an outdoor electrical outlet must be is a maximum of six feet and six inches above the ground. There is no minimum height required. It is also required to have all ground-fault circuit-interrupters (GFCI) protected for all outdoor receptacles. There must be a receptacle required for decks, porches, and patios.

What are the requirements for outdoor and garage receptacles?

Electrical inspector John Williamson gives a quick rundown of the requirements for outdoor and garage receptacles. Outdoor receptacle outlets are required to be installed on both the front and back of a home, as well as around a garage, in order to provide a safe place to plug in an extension cord.

Do you have too many receptacles in your garage?

For many of us, there is no such thing as having too many receptacles in our garages. It seems like we could always have a few more. However, the garage electrical outlet code is just a minimum set of installation rules, including height.
