

What is the best portable evaporative cooler?

Overall, the VAGKRI 3000CFM is a very cool portable evaporative cooler. The Hessaire MC18M is a stellar choice if you're looking for a compact outdoor cooler that you can easily carry or roll around and is also budget-friendly.

What makes a good outdoor evaporative cooler?

Outdoor evaporative coolers are usually made from heavy-duty plastics (such as ABS) or rust-free metals, constructed to brave the sun and some water exposure. Good coolers often have molded pieces, like tanks, which are part of the assembly and help with air flow and cooling efficiency.

Can a evaporative air cooler fit in a closet?

Small- and medium-sized models (like the Honeywell TC30PEU Portable Evaporative Air Cooler) can fit inside a closet, while larger units for workshops or barns (such as the beefy Big Ass Fans Cool-Space 350) need a dedicated space year-round. Evaporative coolers use a manually or continuously filled water tank to soak the cooling pad.

How do I Choose an evaporative cooler?

The size of the room or space you're looking to cool is the most important consideration when selecting an evaporative cooler. We recommend measuring your space and lining it up with the advertised coverage area on the product description.
