

What is an electrical house?

An electrical house consists of various high-quality components ranging from medium voltage (MV) to low voltage (LV) switchgear, marshaling panels, breaker controls, variable frequency drives (VFDs) and other auxiliary equipment. Electrical houses aren't new technology.

What is an ABB ehouse?

ABB eHouses are prefabricated transportable substations, designed to house medium voltage and low voltage switchgear, critical power equipment and automation cabinets. An eHouse solution is a cost effective, risk reduced alternative to conventional concrete block and brick construction.

Why should you build an E-House?

Building an "ehouse" tends to lower construction costs by up to 20%. This allows for more predictable costs and schedules when constructing the module. These modular houses offer easy installation and mobility, making e-house manufacturers an excellent alternative to traditional building methods in various industries.

When should a prefabricated electrical building be used?

In addition, prefabricated electrical buildings or skids are typically used when: Prefabricated electrical assemblies can also significantly reduce project management requirements. Onsite coordination and installation problems are minimized or eliminated because all equipment is installed, tested and ready to use upon delivery.
