

# How to build outdoor underground rack ground

Why do you need an underground cellar?

An underground cellar takes advantage of these stable, cool temperatures. But you'll want to get below the frost line at a bare minimum. Temperature control is an important component in prolonging the shelf life. Because we all know that cool temperatures extend our perishable food's shelf life.

Why do you need to dig underground?

As you dig down into the earth, the layers of soil between you and the surface act as an insulator. For example: In the hot summer, underground temps are much cooler than the surface. In the winter, a few feet underground is much warmer than a howling blizzard outside. And you don't need to dig far to get the benefits... In fact:

What is underground food storage?

Near-instant spoilage. While that same milk will last weeks in a cool refrigerator. It's nature's refrigerator. Without the need for chemical refrigerants or electricity. And THAT's the simple beauty of underground food storage. It extends your food's shelf life without modern technologies.

What is the best way to store a garbage can?

Naturally, that eliminates wood crates or cardboard boxes. Instead, using metal garbage cans, plastic drums, or plastic storage totes is best. Just ensure the container is made of strong materials to prevent collapse. And won't degrade when in contact with moisture for extended periods.
