How to prevent water condensation inside an enclosure?

An ideal way to prevent water condensation inside any enclosure is to prevent moisture getting inside the enclosure in the first place. However, in real life, this kind of protection is not always possible and we need to have other ways in which we can prevent condensation from forming.

What happens if moisture builds up in an enclosure?

The build-up of moisture can lead to a number of issues, especially when electronic and electrical components are involved. Corrosion, short-circuiting, diminished performance, dangerous electrical arcs, and expensive down time can all result from just a little bit of condensation in an enclosure over time.

How can a non-metallic enclosure prevent condensation?

If you are not able to position an enclosure away from any temperature fluctuations and damp areas, then two of the most-often used ways to prevent condensation are ventilation and heating devices. One benefit that non-metallic enclosures have over metallic enclosures is that the insulation properties are better and the heating capacity is lower.

Are outdoor enclosures prone to condensation?

And with the extreme weather and wild temperature swings of recent years, outdoor enclosures are even more highly exposed to the risks of condensation. Condensation may also form in indoor enclosures, of course, when humidity levels are too high and temperatures swing sharply. Why is condensation dangerous?

As warm, moist air is introduced into the enclosure and comes into contact with cooler surfaces, condensation forms, resulting in the build-up of moisture. The most important initial step is to ensure ...
