

How do you put a metal leaf on a project?

With one smooth motion pull the leaf to the project surface and deposit it. Gently rub (with lint-free cotton cloth or ball) the metal leaf onto the surface. Be careful as the leaf is fragile and can be easily ruined.

How do you Gild a metal leaf?

For exterior projects and demanding environments, oil gilding is the preferred method. Oil-based adhesive sizes bond exceptionally well to metal and work reliably with both genuine and imitation metal leaf.

What materials are used to make leaves?

All these leaves are hand made from various metals, such as copper, brass, nickel, silver plated brass, silver plated copper, galvanized steel, food can steel, brass wire mesh and pewter. All leaves with mixed metals are riveted together with hand made rivets in copper, brass or silver plated wire.

How are leaves made?

All leaves with mixed metals are riveted together with hand made rivets in copper, brass or silver plated wire. Some leaves are created using the fold form method, some chasing/repousse or fabricated method. Almost all metals are from repurposed items purchased in thrift stores.
