Manufacturer: Cubitts Construction Systems Ltd-Lowton-Cubitt Housing Ltd. Period Built: 1964 - 1970s. Number Built: 3700. Designer:...

When was the first steel framed house built?

The first steel framed house was built in Australia in the early 1940's according to newspaper reports. However, around that time steel was more commonly used as cladding material for roofs and walls rather than in framing. Many efforts to create steel framing systems were attempted from the 1950s with varying degrees of success.

How did steel frame construction affect housing development?

The rapid and efficient construction methods afforded by steel frames enabled the development of large housing tracts in suburban areas. Developers could mass-produce steel frame homes swiftly and cost-effectively, transitioning from the traditional slow wood-framed construction.

Why are steel frame homes so popular?

The association of steel frame homes with durability, safety, and modern design played a significant role in shifting public opinion. The Lustron homes, for instance, became a notable example of prefabricated steel homes offered to returning veterans, showcasing the material's potential in residential construction.
