

What are dust free PC enclosures made of?

Our PC enclosures are built using industrial ABS Composite for high-impact resistance and suitability for heavy-duty industrial environments. Protect your sensitive electronics from damaging heat, dust, and debris -- guaranteed for five years. "We are very pleased with the Desk Sneeze Guard that we purchased from Dust Free PC.

What is a dust protection rating?

A rating like IP55 offers some protection, but it's not fully sealed-- dust might still find its way in, though not in amounts that would interfere with the device's operation. A rating like IP65 or higher (e.g. IP66, IP67, IP68) means the enclosure is fully dust tight, designed to block 100% of dust particles under standard test conditions.

Why should you choose a high dust protection enclosure?

Choosing an enclosure with a high dust protection rating helps maintain reliability even in harsh, high-traffic settings. Some electronics just can't tolerate even the smallest bit of dust. Think medical equipment, lab instruments, or precision control systems.
