

What is the protection IP55 & IP54?

We have electric enclosures with protection IP55 and IP54. The protection IP55 is complete protection against harmful deposits of dust contact with live or moving parts inside the enclosure. The ingress of dust is not totally prevented, but cannot enter in a sufficient amount to interfere with satisfactory operation of the machine.

What is IP54 / IP65 / IP66?

1. Industrial Automation IP54: Indoor PLCs, switch cabinets, and touch panels in dry areas. IP55: Light-duty machinery enclosures exposed to occasional cleaning or humid conditions. IP65/IP66: Outdoor controllers, spray-zone enclosures, and dust-intensive environments (e.g., packaging lines).

What is the difference between IP54 and IP65 enclosures?

Both IP54 and IP65 enclosures protect against dust and water, but there's a big difference in strength. IP54 gives you limited dust protection and guards against water splashes from any direction. It's great for indoor or light outdoor use where conditions are fairly controlled.

What is IP54 & how does it work?

A Complete Guide to Electrical Enclosure Protection IP54 is one of the most common ingress protection (IP) ratings used for electrical guide cabinets, industrial enclosures, and outdoor equipment. It defines a specific level of defense against dust and water, based on the international standard IEC 60529.
