

What is a metal wall panel?

Metal wall panels are one of the most economical options to clad the walls (both exterior and interior) of a building. But while cost is important, it isn't everything. They are also highly durable, rarely require additional framing and are easy to replace or configure when building repairs or modifications are needed.

What are exposed metal roof & wall panels?

Exposed fastened metal roof and wall panels represent the most economical option for commercial projects. These systems consist of overlapping panels that are fastened directly to the roof deck or wall framing through the face of the metal. They are called "exposed" because the fastener head remains visible once installed.

What type of wall panels can be installed horizontally?

Precision Series steel or aluminum wall panels can be installed both horizontally and vertically. The PAC-CLAD series of Composite metal wall panel systems provide unmatched performance and stunning visual effects for any commercial metal wall panels, industrial metal cladding panels, or retail application.

What types of wall panels are available?

The Precision Series and Flush Panels are available in both steel and aluminum - adding bold aesthetics and sleek, seamless finishes. Explore extensive color options including metallics and wood grains, for sustainable architectural solutions. The newest addition to our wall system line is the Modular AL metal wall panels.
