

What is a fireproof junction box?

The main purpose of a junction box is to protect electrical wiring from outside elements, such as moisture and dirt, which can lead to short circuits and other issues. Flameproof junction boxes are a special type of electrical box designed to prevent the spread of fire.

Are junction boxes fire rated?

When using fire rated cables on a project, the correct specification of junction boxes can often get overlooked. When fire strikes, it is not selective in the location junction boxes and to maintain system integrity it is imperative that junction boxes are specified to the same rating as the cable being used.

What happens if a junction box catches fire?

This means that if the building catches fire, the junction box might catch fire as well. A non-flameproof junction box can release toxic gases into the air and cause a secondary fire. A junction box is a metal cabinet used to house electrical wiring and increase the ease of access to specific outlets or light fixtures.

Are flameproof junction boxes dangerous?

If there is ever a fire in your home, wiring in a furnace room or some other area with flameproof junction boxes will not become dangerous. You can identify flameproof boxes in your home by looking for a label on the outside of the box. The label will say "Type 'X'", which is the designation for flameproof boxes.
