

What is an outdoor unit?

The Outdoor Unit (ODU) is part of the digital microwave transmission system. It supports a point-to-point digital fixed radio service and works together with the Indoor Unit (IDU) to provide multiple types of service interfaces. The XMC-2H, WL-2H, WL-2, and WL-3E series ODUs is a type of high power single-channel ODU.

What are underground radio communication systems?

Underground Radio Communication Systems are an indispensable tool for ensuring safety, efficiency, and effective coordination in mining operations. These systems have revolutionized how communication takes place below the surface, providing workers with the ability to stay connected and respond to emergencies promptly.

How do underground radio systems work?

Network Integration: Modern underground radio systems are integrated with surface communication networks. This allows for seamless communication between underground workers and surface personnel, which is crucial for coordination, safety monitoring, and operational decisions.

What are the benefits of underground radio systems?

Durability and Resistance: Mining environments can be tough on equipment. Underground radio systems are specifically designed to withstand extreme temperatures, high humidity, dust, vibrations, and even potential impacts from heavy machinery. This ensures that communication remains functional even in the harshest conditions.

We put three professional-grade DMR digital radios through rigorous testing in multi-level parking structures to evaluate their real-world performance in these signal-hostile environments.

Dedicated radio room within a new or existing building: Self-contained outdoor cabinets (land or rooftop), or semi/fully underground vaults. These are often used where zoning or site availability are issues, ...
