

Can reclaimed steel be used in a construction project?

CE marking and compliance with BS EN 1090-1 for fabricated structural steelwork became mandatory in 2013 and since then a reclaimed piece of steel cannot be used in a construction project without test certification.

How do coatings reduce eddy current losses in electrical steel?

Coatings play a crucial role in minimizing eddy current losses in electrical steels through various mechanisms. By providing insulation resistance, coatings effectively reduce the flow of eddy currents, which are electric currents induced in a material via changing magnetic fields.

Why is reclaimed steel a problem?

But still it finds that the demand for reclaimed steel lags behind the abundant supply, which flies in the face of decarbonisation targets. This is due to the complexity of working with reclaimed steel. And the problems multiply at the scale of a small residential project.

What is fully processed electrical steel?

Fully processed electrical steel is delivered with an insulating coating, full heat treatment, and well-defined magnetic properties. It is utilized in applications where punching does not significantly degrade the electrical steel's properties.

It can be easily recycled and requires less energy to cure. It also provides protection from UV fading and has a lifetime of 10+ years. Displayed cab interior is a steel shell wall design used on pre-engineered ...

Depending on the fineness required, the steel free tyre granules are ground by large rollers and pushed through sieves. Finally, the quality rubber powders, chips, granules and crumb in grades of different ...

With our two product areas, non grain oriented and grain oriented electrical steel, we offer innovative steel grades that meet high sustainability requirements while ensuring maximum performance and ...

Gas turbine casings are key components in energy equipment, requiring high-precision multi-angular roughing and finishing operations. These components are typically fabricated from high ...

Recycled steel is increasingly being explored for its potential in sustainable construction. For example, a recent study published in Construction and Building Materials highlighted the use of ...

Our work has enabled even the smallest and most isolated areas to have their steel packaging recycled, and it has ensured that steel recycling has contributed to both regional and national economies.

Recycled steel requires 75% less energy to produce than virgin steel, reducing CO2 emissions by 58% per ton, according to the Steel Recycling Institute. This circularity is a major ...

These electrical steel casing are made from hard plastics that ensure better durability and are strong enough to protect items kept inside them. You can choose from a variety of distinct electrical steel ...

This article delves into why steel casing is an ideal choice for electrical insulation projects, its benefits, applications, and critical considerations, helping you make informed decisions that align ...

Steel is the only major material group today that can meet tomorrow's challenge of a fully circular economy due to its high recyclability, whereby 85-90% of steel products are recovered at their end of ...

This comprehensive review delves into the advancements in the field of electrical steels, focusing on key aspects such as microstructure, loss analysis, magnetic properties, alloying ...

This article will delve into processed steel solutions that are integral to electrification infrastructures, addressing various applications such as utility services, electric vehicle (EV) charging ...

Further protection is provided by painting or varnishing the casing wiring once again on all sides after the wiring is finished. This also prevents entry of external damp.

The Importance of Using Recycled materials in Oil casing for Environmental Sustainability Oil casing plays a crucial role in the extraction and transportation of Oil and gas. Traditionally, oil casing has ...

This framework, or casing, provides support, protection, and a finished appearance to the building elements it encloses. Common applications include door frames, window frames, and ...

As North America's largest steelmaker and recycler, Nucor uses circular, electric arc furnace (EAF) steelmaking technology to recycle old, reclaimed steel at the end of its usable life into new steel.
