

Can reeding be used on metal?

No, while wood is the most common material for reeding, it can also be applied to metal, stone, and occasionally plastic, to achieve a similar decorative effect. Can reeding be combined with other decorative techniques?

What is reeding used for?

The purpose of reeding is purely decorative, adding texture and visual interest to what might otherwise be a flat, unadorned surface. In interior design, reeding is often found on the edges of furniture, woodwork around doors and windows, and even in finer details such as lamp bases and silverware handles.

Does reeding offer structural benefits?

No, reeding is primarily a decorative technique and does not offer structural benefits. Its main purpose is to add visual interest and texture to surfaces. How does reeding differ from fluting?

What is reeding in architecture?

Reeding is a historical decorative technique that dates back to classical architecture, where it was prominently used in columns and furniture details. This design feature comprises a series of narrow, parallel grooves carved into the surface of wood, metal, or stone.
