

Can optical fibers be used in a battery management system?

Figure 12. Block diagram of the battery management system with FBG internal sensors and low-cost photodetectors . A few concerns have also arisen about the insertion safety of optical fibers into batteries and the durability of the materials both on the fiber side and the battery electrode side.

Can optical fiber sensing be used in battery monitoring?

The outlook for the future development and application of optical fiber sensing in battery monitoring is presented. With the proposal of a "smart battery," real-time sensing by rechargeable batteries has become progressively more important in both fundamental research and practical applications.

Are fiber optic sensors compatible with battery systems?

A reasonable matching is discussed between fiber optic sensors of different range capabilities with battery systems of three levels of scales, namely electric vehicle and heavy-duty electric truck battery packs, and grid-scale battery systems.

Can fiber-optic sensing be used on Li-ion batteries?

Fiber-optic sensing is currently most practical to apply on large-scale Li-ion battery products where the cost of the interrogation system can be spread across many individual battery cell or module sub-components measurement locations.
