

How are M&P pistols made?

For M&P's, where the polymer-framed option is injection molded, M&P(TM)9 M2.0's; Metal frames are produced in a CNC machine. The aluminum frame on the Metal is rigid throughout. For the polymer models, in developing upgrades to the first generation of M&P pistols, Smith & Wesson added an extended steel chassis to M&P 2.0 models.

What is the difference between polymer and steel framed handguns?

When looking at heavier steel-framed handguns vs. polymer, you'll find that polymer pistols can feel top-heavy when compared to the balance of a metal frame. Manufacturing processes also differ between the two. For M&P's, where the polymer-framed option is injection molded, M&P(TM)9 M2.0's; Metal frames are produced in a CNC machine.

What makes a good metal gun?

Well, it's got to be super modern, with all the features and trimming of a modern polymer frame gun, but you know, metal. It needs to be ergonomic, easy to handle, and a weapon that could still be at home in the heavy-use world. This includes competition, concealed carry, and duty use. The world of all metal guns is fairly broad.

Is the M&P9 metal a good gun?

With the M&P9 Metal, you get the best of both worlds with a metal-framed pistol and the reliability of the M&P platform. There is still polymer on the M&P9 Metal and it's in all the right places providing texture to aid in recoil control. I love that the newest M&P kept the removable palm swell feature.

It's not super small, but it can be a little tricky if you want a modern, all-metal handgun. Luckily, people like me exist who obsess over metal-frame guns, keep a nice catalog of the latest ...
