

Why do termites eat cable?

This is especially so for cables that are buried direct or for underground use cables. Cable materials are attractive to rodents due to plasticizers and aromatic odours. The colour and texture of the cable sheath material are also attractive to them. Termites live in underground nests deep in the soil.

Do termites eat fibre-glass cables?

Using fibre-glass yarns is popular for optical fibre cables, but it becomes broken when bitten and unpleasant for rodents. For termites, an effective long-term physical barrier would be Nylon-12, which is a rigid material that termites are unable to bite through. In general, these physical methods may last longer but also tend to be costly.

What is a good termite barrier?

For termites, an effective long-term physical barrier would be Nylon-12, which is a rigid material that termites are unable to bite through. In general, these physical methods may last longer but also tend to be costly. An effective alternative is the use of chemical additives labelled pest resistance (PR), anti-rodent (AR), and anti-termite (AT).

How do anti-termite cables work?

On the other hand, anti-termite cables are treated with insect growth regulators, which serve to repel and disrupt their growth and reproduction rather than exterminate them.
