

What is Topcon solar panel?

TOPCon solar panel or Tunnel Oxide Passivated Contact is an advanced cell technology in the solar panel community. People who use it enjoy the improved efficiency and performance of standard silicon solar cells.

What is a Topcon panel?

TOPCon panels are built on n-type silicon wafers and feature a very thin tunnel oxide layer along with a passivated contact layer made of polycrystalline silicon. As an advantage of this design, the energy losses are minimal, and the electron flow is better. So, the panel has a higher energy output.

What types of solar panels does Topco solar offer?

Topco Solar produces a wide range of PV modules that are suitable for all system types: residential, commercial, industrial, and utility. All panels are built in a modern facility with the latest technology for soldering, laminating, and framing, combined with a committed workforce.

What is Topcon technology?

TOPCon technology revolves around the idea of minimizing electron loss by utilizing tunnel oxide passivation, a method that allows solar cells to retain more of the energy generated during sunlight exposure. As a result, TOPCon panels deliver higher performance under various environmental conditions. How Does TOPCon Technology Work?
