What is a Trojan & how does it affect my computer?

Trojans can download code or software that looks legitimate but, in reality, it will take control of your device and install malicious threats including malware, ransomware, and spyware. Trojans aren't limited to Windows laptops and desktop computers; they can also impact Macs and mobile devices.

What is a Trojan & how does it work?

Trojans are a common type of malware, which, unlike viruses, can't spread on their own. This means they either have to be downloaded manually or another malware needs to download and install them. Trojans often use the same file names as real and legitimate apps. It's easy to accidentally download a trojan thinking that it's a legitimate app.
